

Job profile description

Machine Learning specialist

Contact: rrhh@hydra360.net REF:KMML with **your CV**

1.1 The challenge:

We are a startup which is currently developing a disruptive social analytics software tool for marketing and communication business, which forecasts a great potential in local and international market.

Engaged with strategic partners such as Gartner, we have developed the non-commercial product release (under beta-testing), and right now we are working to finished the first commercial release.

We are looking for a specialist in machine learning with knowledge of Decision Trees and Random Forest algorithms and experience in integration of Weka and Mahout libraries in Java.

Since we are a startup, candidates might have a great internal growth opportunity in order to increase their creativity and competitiveness while facing one of the most attractive challenges in our present market.

1.2 Profile Requirements

- University degree
- Proactivity.
- Commitment.

1.3 Valuable additional information in your profile

- English- written and spoken.
- Experience in information retrieval with Solr.
- Experience in big data processing with Hadoop.
- Experience in natural language processing (NLP) in Spanish and /or English with GATE or UIMA.
